The left-heart lead, which was recently approved by the Food and Drug Administration, delivers electrical impulses directly to the heart from a pacing device implanted in a patients chest. The NASA-devel-oped resin is highly flexible, resistant to chemicals, and can withstand ex-treme hot and cold temperatures. The super plastic is biologically inert, thus making it suitable for medical use, including implantable devices. The NASA-developed insulation material enabled the company to develop one of the thinnest left-heart leads available. An electronic nose developed for monitoring air quality on the International Space Station has shown promise as a new weapon against brain cancer. The electronic nose, developed by NASA to automatically monitor the stations air, is able to detect contaminants within a range of one to approximately 10, 000 parts per million. In a series of experiments, researchers used NASAs device to sniff brain cancer cells and cells in other organs. Their data dem-onstrated that the electronic nose can sense differences in odor from normal versus cancerous cells. These experiments will help pave the way for more so-phisticated biochemical analysis and experimentation. Transfer of NASA technology to the private sector is performed by NASAs Inno-vative Partnerships Program. The agencys view is that advancing technology through partnerships enables it to address its own needs and apply NASA-derived technology to a range of applications that can provide broad benefit to the public. The program consists of three elements: Technology Infusion, Innovation Incubator, and Partnership Development. For FY 2010, NASA is requesting 184. 8 million for...
