RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 288 pages. Dimensions: 9.7in. x 7.4in. x 0.6in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1911 edition. Excerpt: . . . with alkalies (hence the name sincalin). It occurs, together with muscarine, (HO)CHCH, N(CH₃)₃OH() (B. 27, 166), in flyagaric. History. --A. Strecker discovered this base (1862) in the bile of swine and oxen. He gave it the name choline, from xii De-Liebreich obtained it from protagon, a constituent of the nerve substance, and at first named it neurine, from vcpov, nerve; this he later changed to bilineurine, to distinguish it from the corresponding vinyl base, which continued to bear the name neurine. The constitution of choline was explained by Baeyer, and Wilrtz showed how it might be synthetically prepared by the action of trimethylamine upon a concentrated aqueous solution of ethylene oxide: (CH₃)₃N C, H₄₀H, O (CH₃)₃NCH, . CH, . OH Its hydrochloride is produced from ethylene chlorhydrin and trimethylamine. Choline deliquesces in the air. It possesses a strong alkaline reaction and absorbs CO, . Its platinum double salt, (C₅H₁₁ONCl), . PtCl₄, crystallizes in beautiful reddish-yellow plates, insoluble in alcohol. See B. 27, R. 738, for choline derivatives. Isocholine, CH, . CH(OH). NfCH,), . OH, is obtained from aldehyde-ammonia (B. 16, 207). Homocholine, HO. CH, . CH, . CH, N(CH₃)₃OH (B. 22, 3331). Neurine, vinyl-trimethyl-ammonium hydroxide, -OH This base resembles choline. It is very poisonous. It is produced when choline decomposes, or upon boiling it with baryta water. It has also been obtained from the brain substance. It occurs with the ptomaines--alkaloids of decay, partly poisonous and partly non toxic. It may be...
