VORTEX-INDUCED MOTION OF NONLINEAR OFFSHORE STRUCTURES

LAP Lambert Acad. Publ. Jun 2010, 2010. Taschenbuch. Book Condition: Neu. 220x150x12 mm. Neuware - Mooring systems employed for floating offshore structures commonly produce nonlinear load- excursion characteristics. The nonlinear compliance and the consequent amplitude-dependent natural frequency, influence the vortex-induced motion of the structure. Linear stiffness modelling of catenary moored structure response has been shown to produce significant uncertainties regarding the onset and severity of flow-induced vibrations. Little guidance regarding this problem is available in the academic literature or offshore...

Reviews

An incredibly great ebook with lucid and perfect reasons. It is really basic but excitement within the fifty percent of your book. Its been designed in an extremely simple way and is particularly simply after i finished reading this book by which actually changed me, affect the way in my opinion.

-- Dr. Fiona Grimes PhD

Very useful to all of group of people. I actually have read through and so i am certain that i will planning to study yet again once again down the road. I am just very easily can get a satisfaction of looking at a created book.

-- Mark Bernier
